Summary of Principal Assumptions in the Collective Harvest Cashflow

The Cashflow Projection has been derived from the Cashflow Projection included in the latest annual Financial Report¹. This prospective financial information will form the basis of future assumptions for financial reporting purposes, if collective harvest is approved by investors.

Actual revenues, costs and timing will vary from the projections because of changes over time to the work program and prices. The changes may be material.

General Notes to the Projection

The Cashflow projection reflects our current estimate of the cost of the work to be done or services provided, year by year through to harvest, based upon log prices. In the Cashflow, 1 Unit refers to 200 shares.

The “Collective Harvest Cashflow Parakaka Group” has stumpage revenue projected for the harvest of the m3 set out each year. Each forest’s share from the Parahaka Group Collective Harvest Cashflow is shown in the “Harvest” line of each forest’s individual cashflow.

The Land LP Cashflow has costs for re-establishing the forest following harvest and other land holding costs. It is assumed investors receive payment for the re-established treecrop, plus sale of the land, in the final year. Each forest’s share from the Land LP Cashflow is shown in the “Land LP Contributions” line of each forest individual cashflow.

Harvest assumptions include —

- The log volumes and grades are based on the latest pre harvest inventory.
- A sales scenario based upon the Port of Gisborne as the point of sale has been used, and therefore assumes demand will exist at harvest time at this destination. Other scenarios will produce different stumpage outcomes.
- Log prices after the first financial year are Forest Enterprises’ 36-month average log prices.
- Harvesting and Transportation costs are based upon the costs currently being paid by Forest Enterprises for current harvesting.
- The cost of the roading network required at harvest is substantial. At this stage, a provision of \$11.73/ m3 has been provided for.
- The weighted average split between hauler and ground based logging has been used for all forests.

Other assumptions (in addition to the harvest assumptions) include —

- It is assumed that the Land will be sold in the final year of harvest, and the value used is the March 2021 Valuations.
- Replanting of the areas harvested has been assumed to occur in the winter following harvest and the replanted treecrop sold at the conclusion of harvest (in addition to the Land).
- The cashflow above includes the annual \$40 Investor Administration Fee, charged once per investor per year in addition to Calls regardless of the size of shareholding.

¹ Future Distributions in the Cashflow Projection should be taken as a guide only. Prospective financial information, by its nature, is inherently uncertain. It involves predictions of future events that cannot be assured as well as risks and uncertainties which are often beyond the control of the Manager. These risks and uncertainties include, but are not limited to, the non-occurrence of anticipated events or alternatively events occurring that were not anticipated. Various risk factors and the management thereof may influence the future success. Accordingly, actual results may vary from the prospective financial information, and those variations may be significantly more or less favourable. The Manager does not guarantee the achievement of the prospective financial information.
